

HALCYON FLIGHTWORKS

A320neo

Quick Start Guide

QUICK START

01 · Welcome

- 1

Thank you for flying the Halcyon A320neo. This guide takes you from a cold and dark aircraft to the runway in about twenty minutes. The full procedures are in the Flight Crew Operating Manual.

The EFB shows the same step with the switches highlighted in the virtual cockpit. Press the arrow on the tablet to move on, or open the checklist page to tick each item yourself.

Control	Where
EFB	Left side panel
Checklist	EFB · Checklists
Ground services	EFB · Ground

02 · Installing

- 2 Copy or link the halcyon-aircraft-a320neo folder into the simulator's Community folder. Keep the folder name exactly as it is: the livery packs look for it by name.

The EFB shows the same step with the switches highlighted in the virtual cockpit. Press the arrow on the tablet to move on, or open the checklist page to tick each item yourself.

Checklist	EFB · Checklists
Ground services	EFB · Ground

03 · First flight

- 3

Start at a gate with the engines off. Open the EFB with the tablet button on the left side panel and choose a fuel and payload preset.

The EFB shows the same step with the switches highlighted in the virtual cockpit. Press the arrow on the tablet to move on, or open the checklist page to tick each item yourself.

EFB	Left side panel
Checklist	EFB · Checklists
Ground services	EFB · Ground

04 · Cold and dark

- 4

Batteries to AUTO, external power ON, and wait for the EFB to show the aircraft as ready.

The EFB shows the same step with the switches highlighted in the virtual cockpit. Press the arrow on the tablet to move on, or open the checklist page to tick each item yourself.

Checklist	EFB · Checklists
Ground services	EFB · Ground

05 · Aligning the IRS

- 5

Set the three ADIRS selectors to NAV. Alignment takes seven minutes, or fifteen seconds with fast alignment on the EFB.

The EFB shows the same step with the switches highlighted in the virtual cockpit. Press the arrow on the tablet to move on, or open the checklist page to tick each item yourself.

Ground services	EFB · Ground

06 · Programming the FMS

- 6

Enter the origin and destination, load the flight plan from the EFB and complete the performance page with the speeds it proposes.

The EFB shows the same step with the switches highlighted in the virtual cockpit. Press the arrow on the tablet to move on, or open the checklist page to tick each item yourself.

Control	Where
EFB	Left side panel
Checklist	EFB · Checklists
Ground services	EFB · Ground

07 · Pushback and start

- 7

Ask for pushback from the EFB ground page. Start engine 2, then engine 1, with the ENG MODE selector on IGN/START.

The EFB shows the same step with the switches highlighted in the virtual cockpit. Press the arrow on the tablet to move on, or open the checklist page to tick each item yourself.

Control	Where
EFB	Left side panel
Checklist	EFB · Checklists
Ground services	EFB · Ground

08 · Taxi

- 8

Release the parking brake, add a little thrust and steer with the tiller. Keep 30 knots at most.

The EFB shows the same step with the switches highlighted in the virtual cockpit. Press the arrow on the tablet to move on, or open the checklist page to tick each item yourself.

EFB	Left side panel
Checklist	EFB · Checklists
Ground services	EFB · Ground

09 · Takeoff

- 9

Line up, set the thrust levers to FLX or TOGA and let the autothrust take over at 80 knots.

The EFB shows the same step with the switches highlighted in the virtual cockpit. Press the arrow on the tablet to move on, or open the checklist page to tick each item yourself.

Checklist	EFB · Checklists
Ground services	EFB · Ground

10 · Climb and cruise

10 Engage AP 1 above 100 ft. The aircraft follows the managed profile to cruise level.

The EFB shows the same step with the switches highlighted in the virtual cockpit. Press the arrow on the tablet to move on, or open the checklist page to tick each item yourself.

Control	Where
EFB	Left side panel
Checklist	EFB · Checklists
Ground services	EFB · Ground

11 · Approach and landing

- 11** Start down at the top of descent the FMS shows and activate the approach phase ten miles before the deceleration point. Arm the ground spoilers, select autobrake LO or MED and fly the aircraft to the touchdown zone.

The EFB shows the same step with the switches highlighted in the virtual cockpit. Press the arrow on the tablet to move on, or open the checklist page to tick each item yourself.

Ground services	EFB · Ground

12 · Troubleshooting

What you see	Why	What to do
The EFB stays black	The aircraft has no power yet	Batteries to AUTO, then external power ON
The FMS rejects the flight plan	The navigation data is older than the plan	Update the navigation data and load the plan again
The engines do not start	The APU bleed is off or the ENG MODE is on NORM	APU bleed ON, ENG MODE to IGN/START
Liveries are missing	The livery pack is not in the same destination as the aircraft	Enable both in the same Community folder
The aircraft pulls to one side on taxi	Asymmetric thrust or a brake left on	Check both thrust levers and release the parking brake
The autopilot does not engage	A flight director or the ADIRS are off	FD ON and ADIRS on NAV, then try again
Sounds are missing inside	A sound pack from another developer is overriding the files	Disable the sound pack and check again

NOTE Most problems are fixed by starting the flight again from the gate with the aircraft cold and dark. Your EFB settings are kept.

13 · Getting help

The support forum answers questions within two working days. Include the version shown on the EFB about page and the list of other add-ons you had enabled.
